Professional Summary

Backend Developer specializing in Node.js, NestJS, TypeScript, MongoDB, and scalable RESTful API development. Experienced in building secure backend systems with authentication, authorization, real-time communication, GraphQL, and modular architectures. Currently expanding frontend skills by learning React to build a stronger understanding of full-stack development. Passionate about designing reliable backend solutions and continuously improving software engineering skills.

Education

Bachelor's Degree in Business Information Systems, *Helwan University* 10/2022 – 06/2026
Current GPA: 3.85 Cairo, Egypt

Technical & Soft Skills

Backend: Node.js, Express.js, Nest.js, RESTful API Development, CRUD Operations, GraphQL
Frontend: React.js, HTML, CSS, Bootstrap
Languages: JavaScript, TypeScript
Databases: MongoDB, Mongoose, MySQL
Authentication & Security: JWT Authentication, Role-Based Access Control (RBAC), Password Hashing, OTP Authentication, Google OAuth, Helmet, CORS, Rate Limiting
Tools: Git, GitHub, Postman, Socket.IO, CRON Jobs
Soft Skills: Communication, Teamwork, Problem Solving, Time Management, Adaptability

Professional Training

Back-End Development Diploma, *Route Academy* 07/2025 – 04/2026

- Completed intensive backend training covering Node.js, Express, NestJS, and TypeScript
- Built RESTful APIs following best practices
- Worked with MongoDB, authentication (JWT), and API testing using Postman
- Developed multiple backend projects simulating real-world systems

Full-Stack Web Development Diploma, *CLS Learning Solutions* 07/2024 – 10/2024

- Completed a 4-month introductory program in Full-Stack Web Development covering front-end and back-end fundamentals.
- Learned core front-end technologies including HTML, CSS, JavaScript, and Bootstrap
- Gained foundational knowledge of back-end development concepts and how client-server applications work
- Developed a small front-end project applying HTML, CSS, JavaScript, and responsive design principles
- Acquired a strong foundation in web development workflow and best practice

Projects

Job Search Platform , *Full-featured recruitment platform connecting users, companies, and HR teams.*
- Built a recruitment platform with advanced job search, filtering, and application system.
- Implemented secure authentication (JWT, refresh tokens, OTP, Google login) with role-based access control.
- Developed RESTful APIs and real-time chat using Socket.IO .
- Designed a modular and scalable architecture using NestJS, MongoDB, GraphQL, and TypeScript
- Integrated security best practices, file uploads, and automated background jobs (CRON)

Fel-Khedma, *Scalable backend system for booking and managing home services.*
- Built a service booking platform supporting service browsing, booking management, and user operations.
- Implemented secure authentication and role-based authorization using JWT (User, Admin).
- Developed RESTful APIs using NestJS for users, services, bookings, and promo code management.
- Created promo code system for discounts and marketing campaigns.
- Built admin APIs for managing users, bookings, promo codes, and basic analytics.
- Designed and optimized MongoDB schemas using Mongoose with proper relationships and validation.
- Applied security best practices (rate limiting, Helmet, CORS, password hashing).
- Implemented CRON job to automate booking status updates and ensure payment consistency.

Saraha App , *Anonymous messaging platform enabling users to send and receive messages secure*
- Implemented JWT-based authentication for secure user access.
- Designed and developed RESTful APIs for messaging operations (send, receive, manage messages).
- Built using Node.js, Express.js, MongoDB, and Mongoose for scalable backend structure.

Social App API , *Social networking backend platform supporting core user interactions.*
- Implemented user authentication and profile management system.
- Developed RESTful APIs for posts, comments, likes, and social interactions.
- Built with TypeScript to improve type safety, scalability, and maintainability.
- Used Node.js, Express.js, MongoDB, Mongoose, and JWT for secure and scalable backend architecture.

E-commerce App , *Online store backend system supporting product and order management.*
- Developed product management, shopping cart, and order processing features.
- Implemented secure authentication using JWT with role-based access control.
- Built a modular and scalable architecture using NestJS and TypeScript.
- Used MongoDB with Mongoose for database design and data modeling.
